

KEYING fibre disc brings you considerably cooler grinding with a long service life and a consistent cutting performance on stainless steel and mild steel. With new technology, an active cooling aid is applied directly to the top level, which enhances cooling and minimises discolouration.

Material group			Abrasive	
			Aluminium Oxide (AO)	Silicon Carbide (SC)
Steel cast steel	Non-hardened, non-heat-treated steels	Construction steels, carbon steels, tool steels, non-alloyed steels, cast steel	●	○
	Hardened, heat-treated steels	Tool steels, tempering steels, alloyed steels, cast steel	○	●
Stainless steel (INOX)	Rust- and acid-resistant steels	Austenitic and ferritic stainless steels		○
non-ferrous metals	Soft non-ferrous metals, non-ferrous metals	Soft aluminium alloys	○	
		Brass, copper, zinc	●	○
	Hard non-ferrous metals	Hard aluminium alloys	●	○
		Bronze, titanium		○
High-temperature-resistant materials	Nickel-based and cobalt-based alloys		○	
Cast iron	Grey cast iron, white cast iron	Cast iron with flake graphite EN-GJL (GG), with nodular graphite/nodular cast iron EN-GJS (GGG), white annealed cast iron EN-GJMW (GTW), black cast iron EN-GJMB (GTS)	●	○
Plastics, other materials		Fibre-reinforced plastics, thermoplastics, wood, chipboard, paintwork	●	
● = Highly suitable		○ = Suitable		

SPECILIZATION:

- ▶ **Aluminium Oxide (AO)**
For universal grinding work from coarse to fine grinding in industry and professional trades.

- ▶ **Silicon Carbide (SC)**
For coarse grinding work with a high stock removal rate and a long tool life.

DETAILED DESCRIPTION:

- ▶ **Grit:** 16#, 24#, 36#, 40#, 50#, 60#, 80#, 100#, 120#
- ▶ **Raw Material:** Silicon Carbide, Aluminum Oxide
- ▶ **Size:** 4", 4.5", 5", 6", 7"
- ▶ **Inner Hole Style:** 4 slotted, 8 slotted, 6 slitted, Flat (See size table)

CHARACTERS:

- ▶ Improve unit time output, with self-sharpening, 3M precision molding abrasive technology to ensure sharp cutting efficiency wear uniform, shorten the delivery cycle; The use of less sand dishes, reduce the labor intensity of workers, reduce costs;
- ▶ Fibre Disc with steel paper as the matrix, using synthetic resin to consolidate the abrasive on the matrix and made of sheet grinding tool.

FEATURES:

- ▶ Ideal for aniding non ferrous metals, glass, stone, granite, ceramic and wood materials.
- ▶ Having standard fibre backing and alumina silicon carbide abrasive grains.

ADVANTAGES:

- ▶ Aggressive cut
- ▶ Active additives with a cooling effect greatly reduce discolouration
- ▶ Aggressive initial sanding thanks to optimised sanding grain
- ▶ Uniform cutting performance
- ▶ Minimal effort required thanks to highly aggressive abrasive grit

WORKING PRINCIPLE:

- ▶ Reducing wear and thermal load of the workpiece can be achieved by reducing contact pressure and speed. (abrasive paste/oil can be used when appropriate)
- ▶ In order to avoid unnecessary tool wear and thermal load, choose to switch to coarser-grit abrasive clothes instead of increasing contact pressure to increase cutting force.
- ▶ Increasing the cutting speed achieves a slightly finer surface.
- ▶ Increasing the contact pressure makes the surface slightly more coarse and if you use the same grit size on soft or hard material the surface finish will look coarse on the softer material.
