

WOOL FELT DISCS

General information

CHARACTERS

- ▶ Felt materials can made of different density, thicknesses and hardness, with fibre-glass backing or plastic backing.
- ▶ Firmer version is suggested to polish flat components and prepare for finer processing. The softer version is more suitable for more gloss and shinning surface.
- ▶ Four different shapes allow the felt discs apply to complicated geometries.
- ▶ High flexible and comfort finishing

APPLICATIONS:

Polishing and mirror finishing, cleansing the surface of non-ferrous metal, metal, steel, stainless steel and other products as well as the concave convex inner groove. The main purpose is to polish in the last step of the process, cleanliness can achieve mirror effect.

USAGES:

- ▶ Apply with different grits polishing paste and polishing pasta bars.
- ▶ The cooperating polishing speed should under 5-10m/s.
- ▶ The mirror effect can be obtained by polishing and repairing with low speed straight grinders.

OTHER INFORMATION:

Backing available: Plastic and Fibre-glass
Inner Hole: 15mm, 16mm, 22mm, M14
Other dimensions, thickness, density and hardness can be custom by your needs

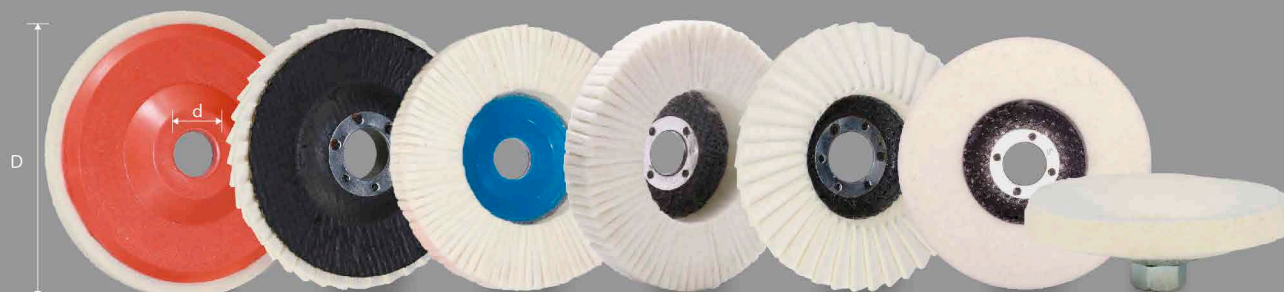

TABLE:
